

# Amended Plan Dallas Head Quarry

The following slides are to address the request for a formal buffer zone for neighboring properties and their relative distance from any quarry activity and establishing a separate quarry road. Included are changes to proposed quarry activity phases due to these adjustments.

Phase 3

Quarry  
Road  
location

Phase 2

Phase 1

Jasmine Rd

## Quarry Road and Activity Phases

- The new quarry road off of Mesquite depicted by the black line follows the old haul road up the draw. It will then turn South to and cross Jasmine at a 90 degree angle. Stop signs will be emplaced at the crossing and visibility will not be an issue.
- Because of the location of the new quarry road and neighbors concerns about activity close to their residences phase one activity will now be moved across Jasmine as depicted in the slide. This will provide an additional distance buffer.
- As depicted the quarry road will be established through the center of the Head property away from residences as much as is feasible.
- There is a house at the intersection of the haul road and Mesquite. This property is owned by Mr. Head

## Planning and Zoning Concerns

- There were concerns brought up by commissioners that I would like to address and make the committee aware of.
- One of the issues brought up was road use. As a commercial truck driver I am obligated to pay a mileage road tax for every mile that I drive in Oregon as well as Idaho. This tax was established to pay for the wear and tear that occurs due to trucking activity. As the weight of a truck increases the tax also increases. In a typical year with two trucks I pay between \$7,000 to \$10,000 for tags, fuel tax, road tax and permits. Oregon is in no way disenfranchised by my activity or hauling to our neighboring state. I run what are called apportioned plates which means I am allowed to operate in several states but must pay a tax for every mile I drive in that particular state.
- There was also a concern about abandonment of the quarry and reclamation. DOGAMI has established robust safeguards in regards to reclamation. A cash bond is established by DOGAMI based on how many acres of land are disturbed at any given time and the difficulty in reclaiming the land. This process is reevaluated on an annual basis and a permit will not be granted if the quarry operator is out of compliance or has exceeded the acreage covered by the bond. This ensures that for what ever reason the quarry is abandoned that the bond will cover the reclamation by a contractor or other third party.
