Good afternoon Donell and thanks for reaching out.

DEQ appreciates the facility's interest in addressing their wastewater storage issues right now. However, we are currently in the midst of assessing the situation and working on an appropriate list of steps that we believe should be taken by the facility to remedy the situation. As such, we are not yet ready to begin discussions regarding a solution to the known wastewater storage issues at the site.

DEQ will be reaching out when we are ready to discuss this issue in further detail.

Thank you,
Dan

Subject: Partners Produce

Dan,
Partners Produce would like to construct an evaporation pond as a backup storage to their wastewater system. I attached a map with two potential locations they showed me just south of Weiser. There facility is located north of Payette and the water would be hauled to the ponds south of Weiser when needed. Would you prefer to start with a meeting or site visit? Or, I could send you a facility site plan preliminary design. Could you send me a list of steps for approval?
Thanks
